"Lumecca is by far the best I have seen. One treatment has unbelievable results. It reduces age spots and skin irregularities as well as improving skin complexion."

Dr. I. Matta

"My patients don't want to have six, seven or eight treatments. They would rather have one treatment that offers best results. We are able to achieve that with our Lumecca IPL."

Dr. E. V. Ross

Safe, gentle and
effective skin
renewal.

LUMECCA™

Clear, Beautiful Skin
in 10 Days

(Compared to 4-6 with other IPL Treatments)

Discover a superior solution to improve skin complexion, reduce skin irregularities and look years younger.

" I would definitely recommend Lumecca. I like how it brightened my face and gave me a beautiful glow. I can really see a difference. "

PAMELA, LUMECCA PATIENT

WHAT IS LUMECCA?

Lumecca is the most powerful intense pulsed light (IPL) to treat pigmented and vascular lesions. After just one use, patients notice significant improvements in the complexion and clarity of the skin. Lumecca operates using photothermolysis, which provides a photofacial through the delivery of a comfortable light treatment.

WHAT ARE THE BENEFITS?

In just 1-3 sessions Lumecca improves the appearance of:

- Age spots (red/brown pigmentations)
- Sun damage
- Vascular lesions (spider veins, port wine stains, leg telangiectasia)
- Rosacea (redness)
- Freckles

WHAT AREAS CAN BE TREATED?

Lumecca can be used on all areas of the body. The most common areas of treatment are zones that are regularly exposed to the sun. This often includes the face, neck, décolletage, legs, hands and arms.

WHAT STEPS MUST BE TAKEN BEFORE THE PROCEDURE?

Avoid direct, excessive sun exposure or tanning one month prior to treatment.

WHAT SHOULD I EXPECT DURING AND AFTER LUMECCA?

During treatment there will be a bright flash of light from the Lumecca that feels like a light elastic sensation. Redness and a slight warming of the skin are normal after treatment and usually subsides within an hour. Over the next 24-48 hours you may see a darkening of pigmented spots; in the week afterwards the pigmented lesions flake off, leading to an evening out of skin tone. After treating vascular lesions you may see the vein blanch and disappear or a color change in the vessel which dissipates after a few days.

HOW MANY SESSIONS ARE REQUIRED?

An improved skin appearance can be noted after the first session. Multiple sessions provide even better results. Treatment regime depends on the severity of skin damage, skin type, type of treatment (vascular vs sun damage) and energy settings.

HOW QUICKLY WILL I SEE RESULTS?

Sun damage and skin complexion results can be seen a few days after the first session. The skin will continue to look younger and more brilliant over time with most visible results after 1-2 weeks. Having multiple photofacial sessions will improve the final result. For vascular treatments such as spider or leg veins, results can be seen in up to 2 weeks.

ARE THERE ANY SIDE EFFECTS?

Most patients do not experience any side effects and any skin reaction usually resolves within a few hours. Patients may find they are sensitive to sunlight immediately after treatment. It is recommended to avoid direct sunlight and tanning.
